HARDWARE ARCHITECTURE

The LK PLC consists of a set of hardware modules which includes the CPU, communication, and I/O modules that can be combined and configured on the backplane to satisfy a broad range of automation control applications.

CPU MODULES

- This is the main LK controller of the whole control system. It is responsible for execution of the programmable logic, all data communications with the modules, the HMI, and the operator stations in operation level.
- Communications with the local modules are done via internal PROFIBUS-DP data bus.
- Communications with the expansion I/O modules are done via external PROFIBUS-DP fieldbus.
- Communications with the operator level are done via Industrial Ethernet (10/100Mbps)
- At the front panel of the CPU module, you will find the LED status indicator, operating mode switches, rotary switches for addressing, SD memory card and backup battery compartment.

I/O MODULES

- Various I/O modules are available to meet different applications such as 16x DI, 8x DO (Transistor or Relay), 8x AI (Voltage/Current), 6x RTD, 8x Thermocouple, AI/AO mix, 16x SOE, and 2x Counters.

SPECIAL FUNCTION I/O MODULES

- Special purpose modules available such as sequence of events (SOE) and Counters.

COMMUNICATION MODULES

- Provide system expansion and other third-party product communication.
- Various popular communications are available such as PROFIBUS-DP, MODBUS, OPTICS-FIBER LINK, etc.

BACKPLANES & TERMINALS

- Two main types are available, the local backplane and expansion backplane.
- Build-in Interfaces for 24VDC parallel input power, Ethernet ports, PROFIBUS-DP, RS-485/RS-232, modems, etc.
- Build-in Input and Output terminal points.

POWER SUPPLY MODULE

- LK910 redundant capable power supply (1+1) to provide reliable parallel (24VDC) input power to backplane. Every backplane has its own power supply to power-up the modules.

FEATURES HIGHLIGHTS

High Performance Processor

- Industrial level 533MHz / 266MHz / 100MHz processor with ultra-fast processing speed.
- Large memory capacity:
 - Program: 16MB / 8MB / 4MB, Data: 64MB / 16MB / 8MB
- 1MB / 1MB / 512KB power-loss protection.
- Fast analog and digital signal processing.

Expandable I/O Control

- Flexible system expansion capability.
- Depending on application, the I/O control points are scalable according to user's needs.
- 533MHz CPU Controller can support up to 2000 digital I/O or 1000 analog I/O.
- 266MHz and 100MHz CPU Controller can support up to 1000 digital I/O or 500 analog I/O.

Various Communication Protocol

- Supports a wide variety of communication protocol (TCP/IP, PROFIBUS-DP, MODBUS, etc.)

Backplane Architecture

- The local backplane provides all the communication link with all the local modules. (CPU, I/O, communication, special function)
- PROFIBUS-DP local data bus up to 12Mbps baud rate.

Redundancy System

- Parallel power supply redundancy.
- CPU controller redundancy.
- Ethernet redundancy*.
- PROFIBUS-DP redundancy.

Hot-Swappable Modules

- All modules are hot swappable for easy maintenance.

Low Power Consumption

- Low power consumption, CPU module draws around 5 watts, I/O module draws around 2~5 watts depending on the models.

In-built Diagnostic

- Self-diagnostic and fault diagnostic.

Compact Structural Design

- Integrated design saving installation space.

Easy and Time-saving Installation

- Backplane provides safety insertion-keys preventing incorrect module insertion.
- Spring-cage wiring terminal.
- Backplane mounting with screws.

Standard Programming Languages

- The programming software supports IEC-61131-3 standard, 6 types of programming language. (LD, IL, FBD, ST, SFC, CFC)

Graphical HMI Designer

- Large Graphical Libraries.
- Alarms, reports, logs, and historical trend.
- User friendly interface.

* Ethernet redundancy available on the redundancy backplane

CERTIFICATIONS

The LK PLC and modules are awarded both the CE Mark for the European Community and the UL and cUL Mark for US and Canada.

LK231 -- PROFIBUS-DP communication adapter module

Complies with PROFIBUS-DP specification. ideally, within 200 meters.

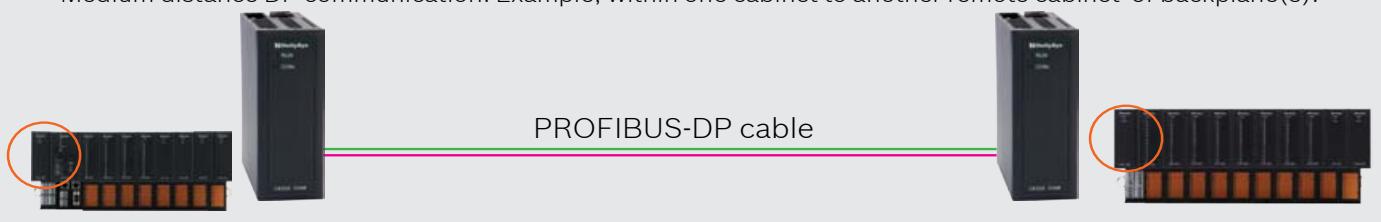

Short distance DP communication. Example, within same cabinet of local and expansion backplane(s).

LK232 -- PROFIBUS-DP communication adapter module with DP-Repeater

Complies with PROFIBUS-DP specification. able to boost the DP signals.

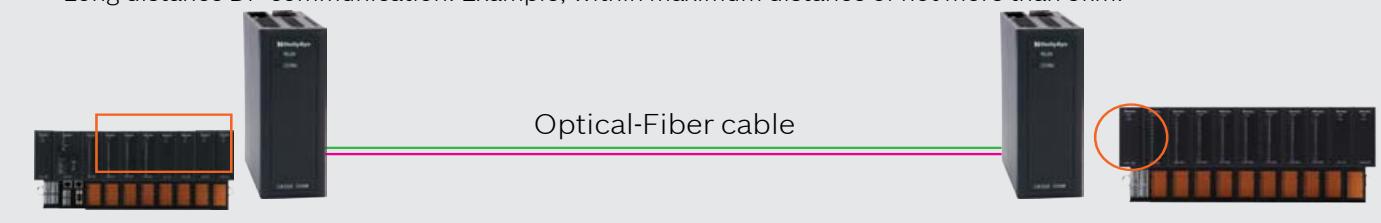

Medium distance DP communication. Example, within one cabinet to another remote cabinet of backplane(s).

LK233 -- DP-to-Optical-fiber interface communication module

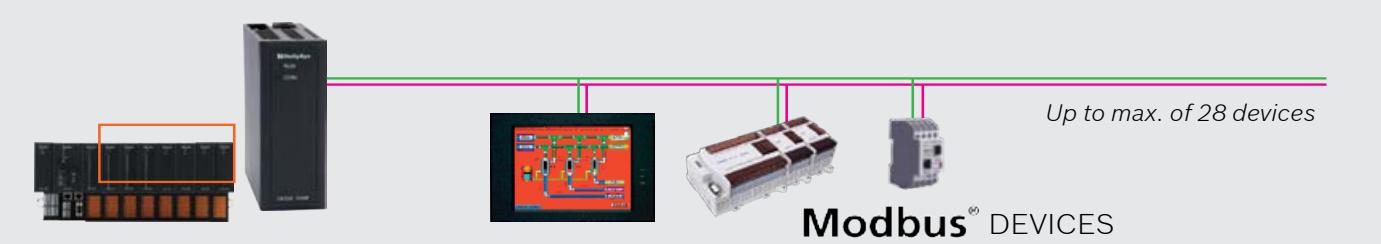

Complies with PROFIBUS-DP specification. able to translated DP signals over optic-fiber and vice versa.

Long distance DP communication. Example, within maximum distance of not more than 5km.

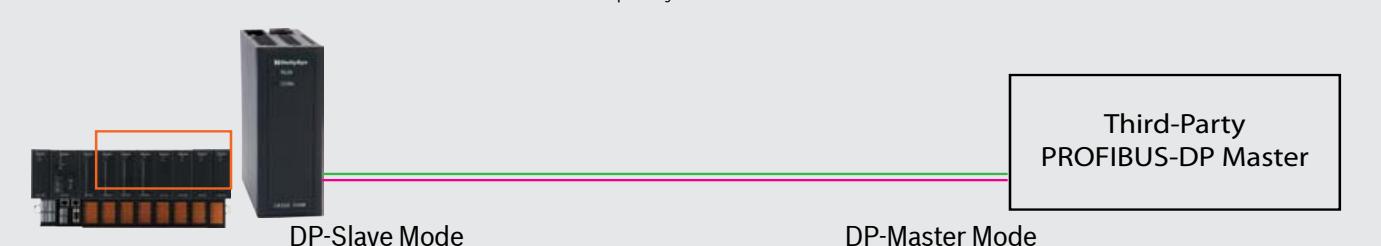

LK239 -- MODBUS communication module (Master/Slave)

For communication using MODBUS RTU/ASCII protocol with MODBUS devices.

LK255 -- PROFIBUS-DP Slave Interface Module

Provides communication interface to other third-party PROFIBUS-DP Master

MAXIMIZE RELIABILITY USING REDUNDANCY

Redundancy is much needed in certain automation application which requires high availability and reliability. A good example of such application is continuous process control. Major economic losses can happen if redundancy are not available during equipment downtime.

The LK PLC provides user with the following redundancy solution such as power supply, controller, Ethernet, and PROFIBUS-DP field-bus communication. Controller redundancy is achieve by using the backplane with dual controller slots. Sub-system comprises of using two controllers, the I/O modules, the communication module, and the expansion I/O backplanes with modules installed.

CONTROLLER REDUNDANCY

- Two controller modules with redundancy support are required to be installed on the local redundancy backplane.
- Upon powering on, the two controllers will be automatically configured as primary and secondary controller based on its slot position. (left-most slot is the primary controller and the slots on the right is secondary controller.)
- The primary controller starts executing the program logic and control all the I/Os, and communications.
- The secondary controller act as a backup controller and will switch over if any failure occurs on the primary controller therefore ensuring continuous process.

INDUSTRIAL ETHERNET REDUNDANCY

- Ethernet Redundancy is available on the Redundancy backplane. Four RJ-45 interfaces Ethernet ports are located on the backplane and each controller is supported by two of the Ethernet port. The Industrial Ethernet complies with the IEEE802.3/u international standard with a communication baud rate supporting either 10Mbps or 100Mbps.

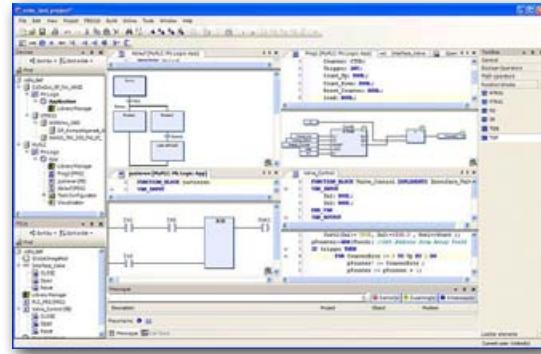

PROFIBUS-DP REDUNDANCY

- The LK controller can supported two PROFIBUS-DP port and both the interfaces are located directly on the backplane.
- PROFIBUS-DP provides the fieldbus networking and is used for all communications with the expansion I/O modules.
- The PROFIBUS-DP complies with the IEC61158 international standard and the EN50170 European standard with a communication speed of 9.6Kbps up to 1.5Mbps depending on cable length and type.

POWERPRO PROGRAMMING SOFTWARE

PowerPro is the programming software designed for LK PLC. Based on Windows environment, PowerPro complies with IEC61131-3 standard delivering an off-line simulation and online debugging functions. It allows the user to test the logic prior any program test run, providing convenience in programming and debugging.

- Fully comply with programming standard of IEC61131-3 standard.
- Powerful operation capability (example, 32-bit floating point operation, optimized PID algorithm, etc.)
- Expansion library with support for user defined library.
- Software simulation, online debugging, and user code functions check.
- View, alarm, and logging functions.
- Password protection for user program.

Flexible Programming Method

- Supporting 6 types of programming languages editor
 - Instruction List (IL)
 - Structural Text (ST)
 - Function Block Diagram (FBD)
 - Ladder Diagram (LD)
 - Sequence Function Chart (SFC)
 - Continuous Function Chart (CFC)
- Depending on variable requirements, programmers can choose the relevant programming languages to work with. While working with FBD, LD, or IL, programmers are allowed to switch in between these programming languages.
- Support different programming languages among subroutines and subroutine interactive call.

Instructions Library

- Over 400 instructions and function blocks can be employed according to variable requirements of user.

- Common instructions include arithmetic, evaluation, boolean, shift, selection, compare, data type conversion, addressing, call, strings and etc.
- Common function blocks include enhanced PID controller, signal generator, function manipulator, analog processing, MODBUS, PROFIBUS-DP, Ethernet, real-time clock, and watchdog, etc.

User-defined Library

- User can write their own function blocks, functions, and subroutines; and store them into an internal library.
- The user-defined library can be invoked in different projects.

Software Simulation

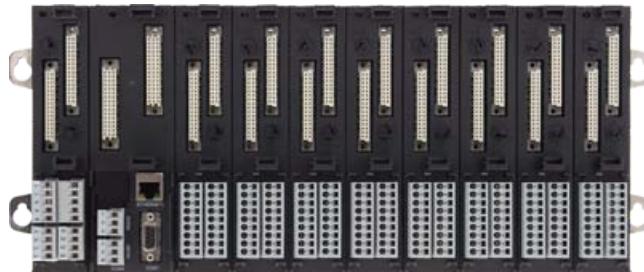

- Support offline simulation and online debugging
- Graphical display of the simulation result.
- Convenient programming and flexible break point debugging.

LK101 - SINGLE CPU LOCAL BACKPLANE - 10 slots

LK 101

Description

LK101 Single CPU local backplane are designed to accommodate 1x Communication, 1x CPU, and 8x I/O modules.

Features

- 1x Comm + 1x CPU + 8x I/O slots
- First 4 out of the 8 slots can be used for interrupt.

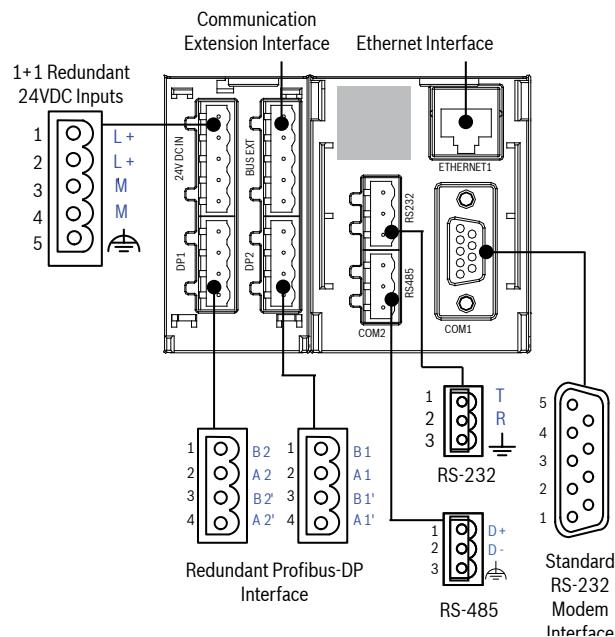

Interfaces

- 2x Redundant PROFIBUS-DP -- 4-terminal pins
- 2x Parallel 24VDC power supply inputs - 5 pins.
- COM2: RS-485/RS-232 -- 3-terminal pins.
- COM1: RS-232 MODEM interface -- DB9.
- 10x spring-cage wiring terminal sets for I/O.
- 1x Ethernet ports -- RJ-45.
- Safety mechanical key preventing incorrect module insertion.

Weight & Size

- 367.5mm x 166mm x 35.5 mm
- 1360g

LK102 - SINGLE CPU LOCAL BACKPLANE - 10 slots (DB9)

LK 102

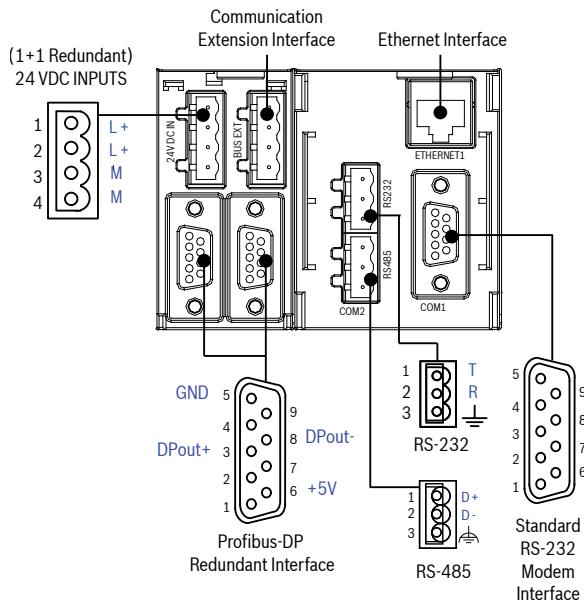

Description

LK102 Single CPU local backplane are designed to accommodate one Communication, CPU, and I/O modules. The difference with Lk101 is on the DP interface which is changed into DB9 interfaces. This is used together with LK230, which is a DB9 interface plug for PROFIBUS-DB for easy connection.

Features

- 1x COM + 1x CPU + 8x I/O slots
- Redundant PROFIBUS-DP communication interfaces. (2xDB9)
- Redundant 24VDC system input power.
- Expansion interface: RS-485/RS-232. (2x)
- Expansion interface: Standard RS-232 MODEM interface. (DB9)
- Spring-cage wiring terminal.
- Support highspeed 32Mbps local bus.
- Ethernet port (1x)
- Safety mechanical key preventing incorrect module insertion.

COM1 interface	DB9
COM2 interface	Double socket, 3x terminal pins. (RS-485 or RS-232, selectable)
PROFIBUS-DP interface	Double socket, 4x terminal pins
Communication Extension Interface	5x terminal pins, pins definition depends on the communication module
System Input Power Interface	5x terminal pins, dual redundancy 24VDC input
I/O Terminals	Spring-cage I/O Terminals, 18 pins (2 column) per I/O module slot
Isolation	
Isolation in-between channels	1000VAC for 1 minute, 5mA leakage current
Isolation Endurance (field-to-system)	1000VAC for 1 minute, 5mA leakage current
System Power	
Power Supply	24VDC (20.4VDC ~ 28.8VDC)
Terminal Resistor and matching	One fixed end, active matching
Physical Characteristic	
Methods of Installation	Flat surface installation
Size of Backplane	420mm x 166mm x 35mm (W x H x D)
Weight of Backplane	1940g
Environmental Requirements	
Ambient Operating Environment	0 °C ~ 60 °C
Relative Humidity	10% ~ 95% non-condensing
Storage Environment	-40 °C ~ 70 °C, (25 °F ~ 55 °F), 5%~95% humidity
Environmental IP Protection	IP20, IEC60529

Dimensions

LK122 - REDUNDANT CPU LOCAL BACKPLANE - 11 slots (DB9)

LK 122

Description

LK121 redundant CPU local backplane are designed to accommodate one Communication, two CPU controller running in redundancy, and I/O modules.

Features

- 1x Comm + 2x CPU + 8x I/O slots
- First 4 out of the 8 slots can be used for interrupt.

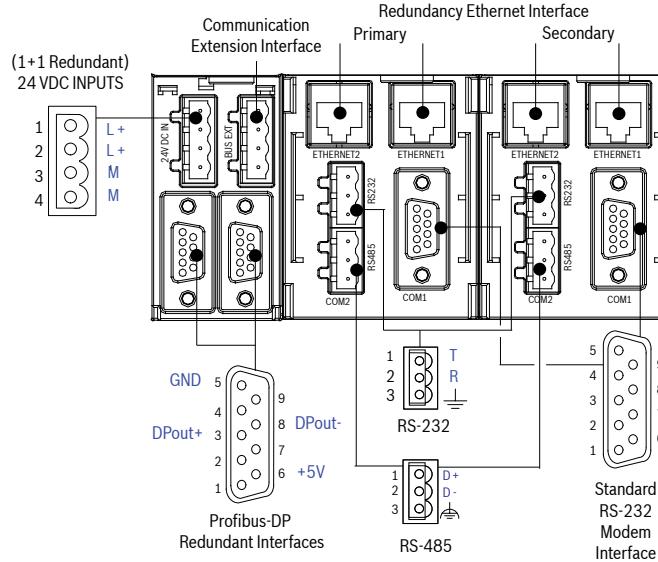

Interfaces

- 2x Redundant PROFIBUS-DP -- 4-terminal pins
- 2x Parallel 24VDC power supply inputs - 5 pins.
- COM2: RS-485/RS-232 -- 3-terminal pins.
- COM1: RS-232 MODEM interface -- DB9.
- 10x spring-cage wiring terminal sets for I/O.
- 2x Ethernet ports -- RJ-45.
- Safety mechanical key preventing incorrect module insertion.

Weight & Size

- 420mm x 166mm x 35.5 mm
- 1940g

CPU CONTROLLER MODULE

CPU

LK
202
205

Description

CPU controller is the brain of the whole PLC control system. It is installed only on the local backplane and communicates with all the modules that is link via the PROFIBUS-DP. LK controllers is available two types of models, Single CPU or Dual CPU with redundancy. The variation of the CPU speed available are 533MHz, 266MHz, and 100MHz.

Features

- High performance controller
- 533MHz at 13 nanoseconds processing speed.
- Large Memory Capacity.
- LK210 supports two cpu in redundancy mode.
- Support SD memory card for program logic backup.
- Backup battery is available in case of power loss.
- Easy configuration, Station ID selectable switch.
- Easy Operating Mode Selection via switch knob.

Operating Mode Selectable Switch Knob

Switch Dial Position	Operating Mode	Definition
RUN	Running Mode	<ul style="list-style-type: none"> CPU is in running mode. Cannot stop the operation via software. Cannot change the PLC program, including downloading of PLC program. Variables cannot be forced to a new value, re-written, reset, or soft-reset. User program cannot be cleared.
REM	Remote Control Mode	<ul style="list-style-type: none"> The CPU maintains its running status from either "RUN" mode to "REM" mode or "PRG" mode to "REM" mode. User can stop or start the CPU operation using software. User can change the PLC program while online. Variables are forceable to a new value, rewritable, resettable, or soft-resettable. User program can be cleared.
PRG	Programmable Mode	<ul style="list-style-type: none"> CPU STOPS ITS OPERATION. User cannot start its operation using software. User can change and download the PLC program. Variables are forceable to a new value, rewritable, resettable, or soft-resettable. User program can be cleared.

CPU

LK

LED Status Indicators

Indicator	Status	Definition
RUN Yellow or Green	GREEN - ON	Active CPU - User program in operation.
	GREEN - Fast Flashing	Standby CPU - User program in operation. Flash four times per second. (4Hz)
	GREEN - Slow Flashing	Single CPU Only (LK207) - User program in operation, Flash once per second. (1Hz)
	YELLOW - ON	Active CPU - User program STOPPED.
	YELLOW - Fast Flashing	Standby CPU - User program STOPPED. Flash four times per second. (4Hz)
	YELLOW - Slow Flashing	Single CPU Only (LK207) - User program STOPPED, Flash once per second.
OK Red or Green	RED - Fast Flashing	System in initialize mode after power is on. Flash four times per second. (4Hz)
	RED - Slow Flashing	PLC user program is not found. Flash once per second. (1Hz)
	GREEN - ON	Controller operating normally.
	GREEN - Fast Flashing	Downloading of PLC program or the Remote Panel is synchronizing data under redundancy. Flash four times per second. (4Hz)
	GREEN - Slow Flashing	Controller Operating Normally but the symbol database file is not found. (Symbol database is used to predefine the periodic data communication) Flash once per second. (1Hz)
I/O Yellow or Green	OFF	I/O not configured or no communication.
	GREEN - ON	Active CPU - Communicating normally with one or more I/Os.
	GREEN - Slow Flashing	Active CPU - Not communicating with any I/Os. Flash once per second. (1Hz)
	YELLOW - Slow Flashing	Standby CPU - Communicating normally with one or more I/Os. Flash once per second. (1Hz)
FORCE Yellow	OFF	There is no force value data.
	YELLOW - ON	Force value data is available.
EN Green	OFF	Outputs are inhibited
	GREEN - ON	Outputs are enabled
BAT Red	OFF	Backup battery power is OK, operation is normal.
	RED - ON	Backup battery not installed or its power is less than 90% of the rated value. Change the battery immediately.

LK231 - PROFIBUS-DP COMMUNICATION ADAPTER MODULE

Description

LK231 communication module provides interconnection for the Profibus-DP bus from the current backplane to the next backplane allowing cascading connection. The termination matching resistor for the Profibus-DP bus at both ends are configured on the module hardware via the jumper switches.

Features

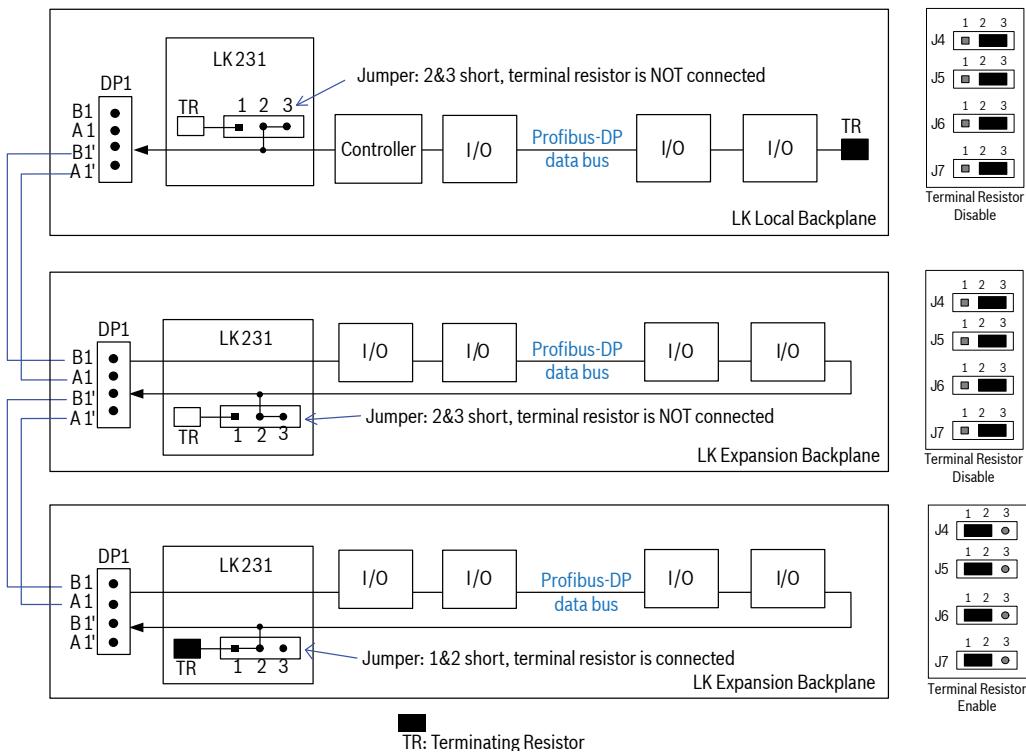

- Interconnect Profibus-DP from the current backplane to the next backplane allowing cascading connection.
- Providing the termination matching resistors for the Profibus-DP.
- Installed on the first slot starting from the left on the local or expansion backplane.
- Support Hot-Swap
- Support redundant Profibus-DP bus.

LED Indicators

RUN Green	COM Yellow	Definition
ON	ON	Communication established, Profibus-DP network operating normally.
Flashing	OFF	Just powered on and communication not established or error occurs.
OFF	OFF	No power supplied or faulty module.

Operating Principles

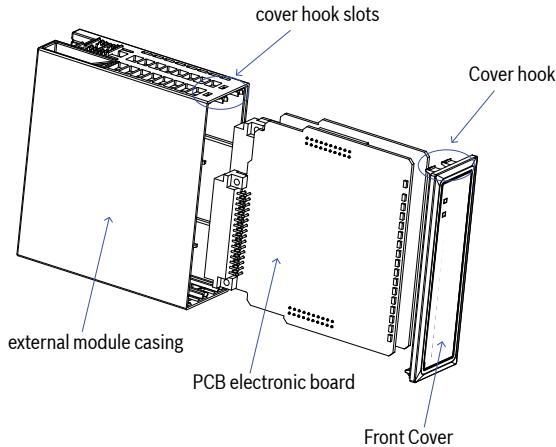

Using LK231 module, the Profibus-DP data bus of the local backplane is connected to the LK231 module of the expansion backplane via the DP terminal connectors found on the backplane. Cascading, the Profibus-DP will then be connected to the next expansion backplane via the LK231 module. This cascading connection establishes the communication link in between the controller and all the I/O modules found on the expansion backplanes. Please see diagram for more details.

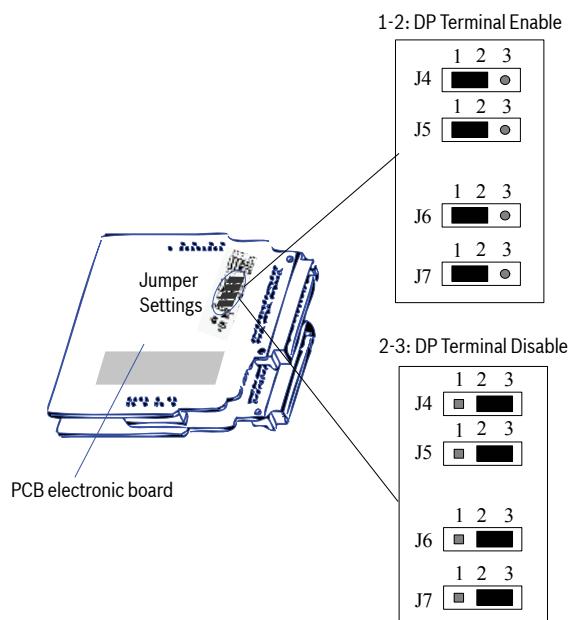

The cascading Profibus-DP wiring diagram using LK231

TECHNICAL SPECIFICATION

LK231 PROFIBUS-DP Communication Modules	
PROFIBUS-DP	
Communication Protocol	PROFIBUS-DP slave mode, compliance with IEC61158-3/EN50170 standard
Communication Interface	Profibus-DP interface double socket, 4x terminal pins per socket
Communication Mode	Slave mode: Providing only the PROFIBUS-DP physical layer switching and matching, do not send any data to the DP bus
Baud Rate	1.5Mbps, 500Kbps, 187.5Kbps, 93.75Kbps, 45.45Kbps, 31.25Kbps, 19.2Kbps, 9.6Kbps
Redundancy	Supported
Hot Swap	Supported
System Power	
Power Supply	24VDC (20.4VDC ~ 28.8VDC)
Current Consumption (max)	50mA @ 24VDC
Physical Characteristic	
Modules Insertion Mechanical Key	A5
Size of Module	35mm x 100mm x 100mm (W x H x D)
Weight of Module	170g
Backplane Installation	Any first slot #0 of local or expansion backplane.
Environmental Requirements	
Ambient Operating Environment	0 °C ~ 60 °C
Relative Humidity	5% ~ 95% non-condensing, no corrosive gas
Storage Environment	-40 °C ~ 70 °C, (25 °F ~ 55 °F), 95% humidity
Environmental IP Protection	IP20, IEC60529

DP Termination Matching Resistor
Jumper Setting

LK232 - PROFIBUS-DP & REPEATER MODULE**Description**

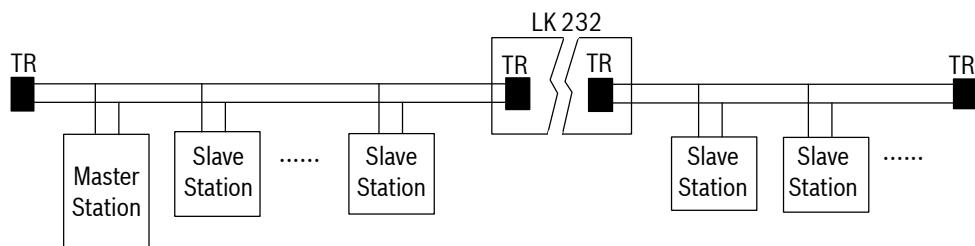

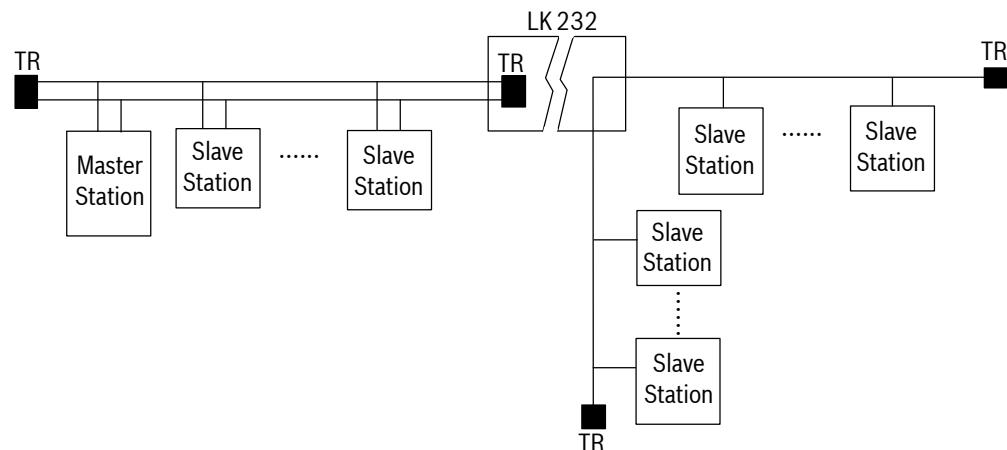

LK232 communication module provides the repeater function for the Profibus-DP network as when the data transmission distance is too long or the load is too high. With the repeater, the quality of the signals being transmitted on the twisted pair cable shall be boosted. The repeater module selects either one of the redundant DP signal channel that works normally and output two channel of DP signals after signal regulation and amplification.

Features

- Profibus-DP Repeater Function: Extend the physical DP cable lengths of the existing DP data bus
- Allowing change of topology of the existing Profibus-DP data bus
- Providing isolation in between two segments of the Profibus-DP data bus
- Installed on the local or expansion backplane.
- Providing the termination matching resistors for the Profibus-DP.
- Support hot swap

OFF	OFF	No powered supplied or faulty module.

Operating Principles**Changing Profibus-DP Network Topology**

TECHNICAL SPECIFICATION

LK232 PROFIBUS-DP Bus Repeater Modules	
PROFIBUS-DP	
Communication Protocol	PROFIBUS-DP slave mode, compliance with IEC61158-3/EN50170 standard
Communication Interface	Profibus-DP interface double socket, 4x terminal pins per socket
Communication Mode	Profibus-DP Repeater function, allows changing of DP network topology.
DP Segment Isolation	500VAC for 1 minute, 5mA leakage current
Baud Rate*	1.5Mbps, 500Kbps, 187.5Kbps, 93.75Kbps, 45.45Kbps, 31.25Kbps, 19.2Kbps, 9.6Kbps
Redundancy	Supported
Hot Swap	Supported
Isolation	
Network Segment 1 &2	500VAC for 1 minute, 5mA leakage current
System Power	
Power Supply	24VDC (20.4VDC ~ 28.8VDC)
Current Consumption (max.)	60mA @ 24VDC
Physical Characteristic	
Modules Insertion Mechanical Key	A5
Size of Module	35mm x 100mm x 100mm (W x H x D)
Weight of Module	170g
Backplane Installation	Any first slot #0 of the local or expansion backplane
Environmental Requirements	
Ambient Operating Environment	0 °C ~ 60 °C
Relative Humidity	5% ~ 95% non-condensing, no corrosive gas
Storage Environment	-40 °C ~70 °C, (25 °F ~ 55 °F), 95% humidity
Environmental IP Protection	IP20, IEC60529

Terminal Wiring

LK233 - PROFIBUS-DP OPTICAL FIBER INTERFACE MODULE

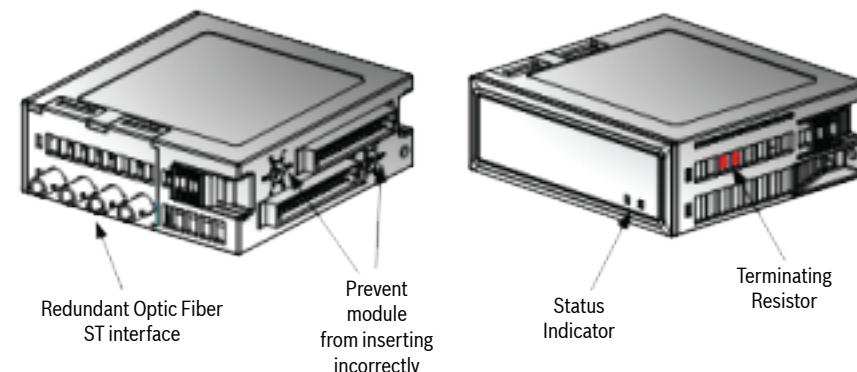

Description

LK233 is a PROFIBUS-DP optical transceiver module installed only on the I/O module slot of the backplane allowing communication data transmission over very long distance which was not possible with PROFIBUS-DP. It is used to extend the distance limit of the PROFIBUS-DP.

Over fiber optics, data communication is immune from electromagnetic interference, lightning, chemical, corrosion, etc which maybe required for use in special project which has harsh or noisy environment.

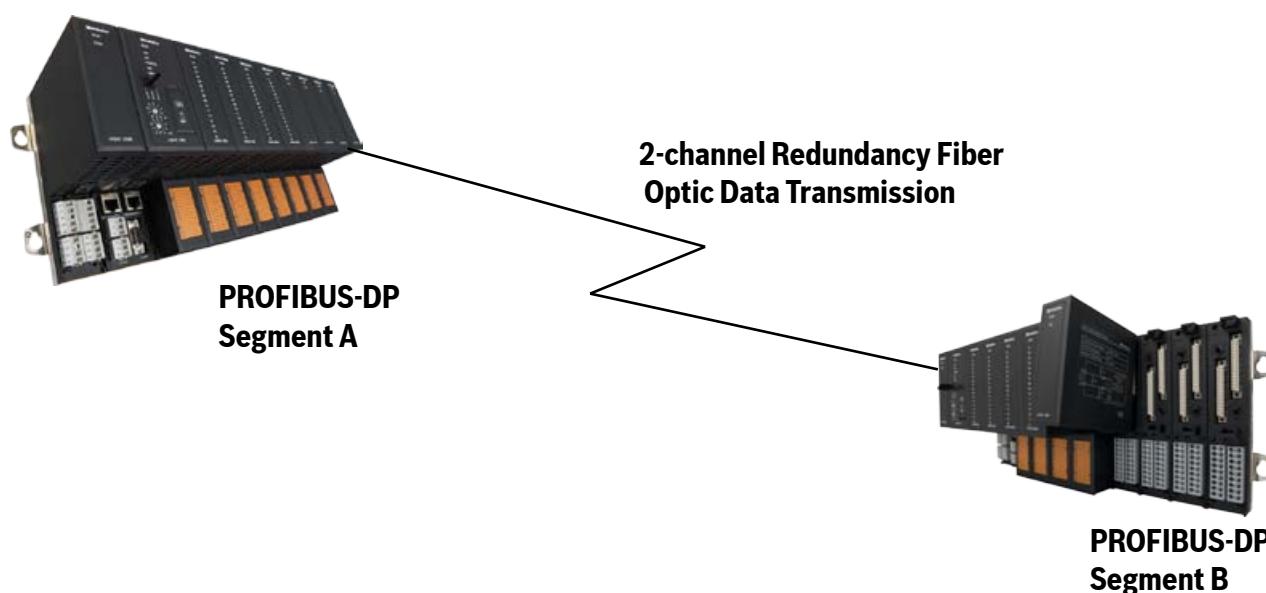

LK233 achieves DP-bus network at the physical layer of the optical transmission. Each conversion expands the physical length of the DP-bus ensuring data safety and effectiveness. Two fiber optic channels are used to fulfill DP redundancy data transmission.

LK233 is installed on the I/O module slot for the local or expansion backplane. It works together with LK231 or LK232 PROFIBUS-DP Communication module.

**COM****LK
233**

Features

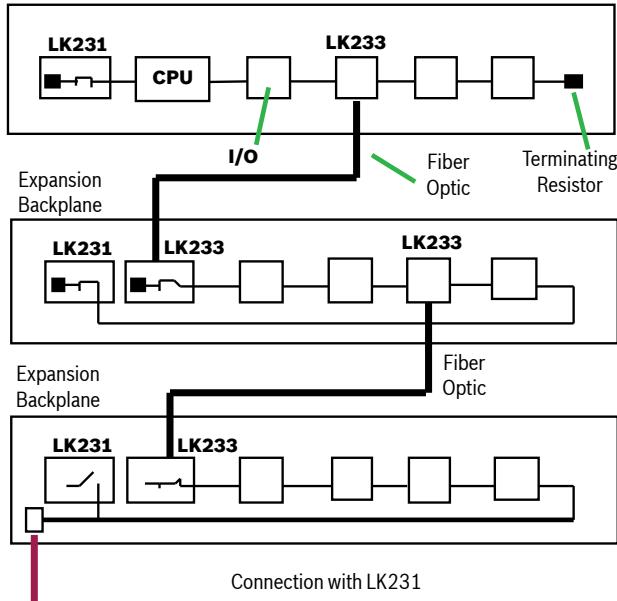

- Extend PROFIBUS-DP transmission distance by using fiber optics.
- 2-channel optical fiber redundancy data communication.
- Support multi-mode optical glass fiber.
- Terminating resistor are provided.
- Installable on Local or Expansion Backplane on the I/O module slot.
- Support hot swap.

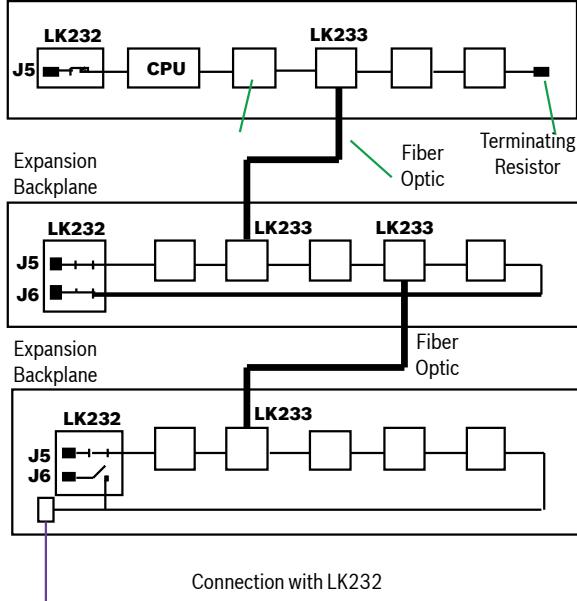

TECHNICAL SPECIFICATION

LK233 Optical Fiber Interface Modules	
Optical Fiber Interface	LK233
Type of Interface	4x ST Interface (Ceramic or plastic)
Number of Channel	2
Optical Fiber type	62.5/125um or 50/125um multi-mode optical glass fiber
Wavelength	1300nm
Transmission Distance	0 to 5km
Drive Capability	
Load capacity (optical side)	Able to drive Multi-mode glass fiber length (longest of 5km)
Load capacity (electrical side)	Able to drive LK I/O module (max. of 256)
Number of Cascade	4 cascade (max. of 8x LK233, every pair of LK233 with Data Delay of 1.2us)
PROFIBUS-DP	
Communication Protocol	PROFIBUS-DP slave mode, compliance with IEC61158-3/EN50170 standard
Baud Rate	1.5Mbps, 500Kbps, 187.5Kbps, 93.75Kbps, 45.45Kbps, 31.25Kbps, 19.2Kbps, 9.6Kbps
Redundancy	Supported
Hot Swap	Supported
System Power	
Power Supply	24VDC (20.4VDC ~ 28.8VDC)
Current Consumption (Max.)	80mA max. @ 24VDC
Physical Characteristic	
Status Indicator	RUN

LK239 - MODBUS COMMUNICATION MODULE (MASTER/SLAVE)

Description

LK239 module provides the same PROFIBUS-DP communication as LK231 in addition of MODBUS protocol communication interfaces supporting up to a maximum of 28 MODBUS slave station.

Features

- Support MODBUS Master/Slave Mode.
- Support PROFIBUS-DP Slave to communicate with the LK Controller.
- Linking-up LK Controller with External MODBUS devices.
- Up to maximum of 28 MODBUS station nodes depending on its bandwidth not more than 244 bytes.
- Installed into the I/O module slot.
- Support hot swap.

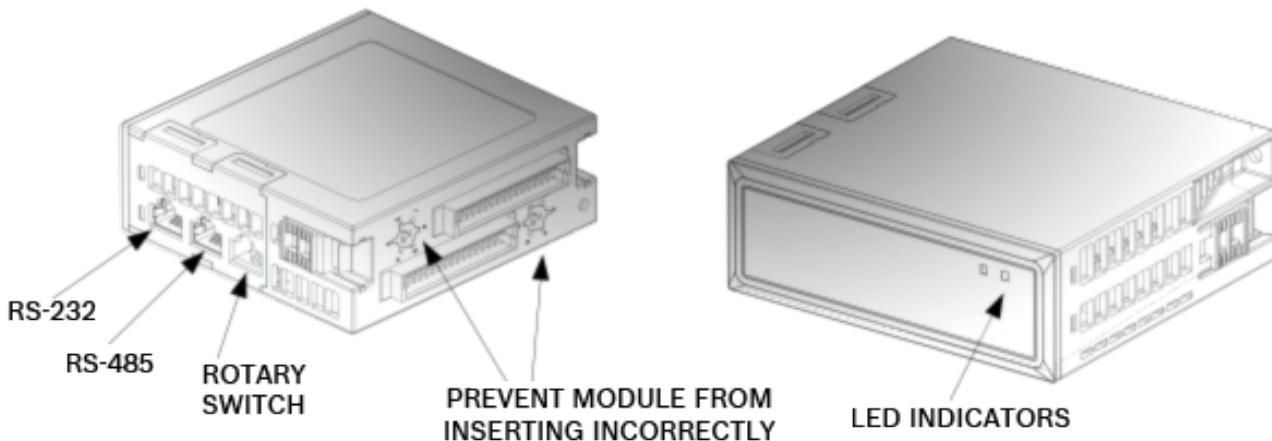

LED Indicators

Indicator	Status	Definition
RUN Green	ON	LK239 and LK controller communication establish normally.
	Flashing	LK239 and LK controller communication not established or error occurs.
	OFF	Power is NOT supplied to the module or faulty.
COM Yellow	ON	LK239 communications normally with one or more MODBUS slave station.
	Flashing	MODBUS communication not established or error occurs.
	OFF	LK239 is not setup with any MODBUS slave station

Terminal Wiring

Interface	Material Code	Cable Specification	DB9 Pin Definition
RS-485	2140200577	Shield cable with magnetic ring, 3m, One end of the cable is RJ45 connector and the other end is DB9 connector.	1 -- GND

			9 -- RS485-
RS-232	2140200576	Shield cable with magnetic ring, 3m, One end of the cable is RJ45 connector and the other end is DB9 connector.	2 -- TXD
			3 -- RXD
			5 -- GND

Interfaces

*special cables are required to connect to LK239, RS-232 and RS-485. Ethernet interface to standard DB9 serial interface.

TECHNICAL SPECIFICATION

LK239 MODBUS MODULE (MASTER/SLAVE)	
MODBUS	
Communication Protocol	MODBUS MASTER or SLAVE (configurable)
Communication Interface	RS-232 or RS-485 Comm (via 5x special comm terminal pin)
Communication Mode	RTU
Data Format	Standard MODBUS format
MODBUS function code	01, 02, 03, 04, 05, 06, 15, 16 (decimal)
CRC	Odd parity, Even parity, or No parity
Maximum no. of slave station	28 nodes at max. (cannot exceed the I/O data length.)
Input/Output data length	244 bytes (at max)
Communication Baud Rate	115.2kbps, 57.6kbps, 38.4 kbps, 19.2kbps, 9.6kbps, 4.8kbps, 2.4kbps, 1.2kbps
PROFIBUS-DP	
Communication Protocol	PROFIBUS-DP slave mode, compliance with IEC61158-3/EN50170 standard
Communication Interface	Profibus-DP interface double socket, 4x terminal pins per socket
Communication Mode	Slave mode: Providing only the PROFIBUS-DP physical layer switching and matching, do not send any data to the DP bus
Baud Rate	1.5Mbps, 500Kbps, 187.5Kbps, 93.75Kbps, 45.45Kbps, 19.2Kbps, 9.6Kbps (auto-adaptive)
Redundancy	Supported
Hot Swap	Supported
Isolation	
Isolation Endurance (field-to-system)	500VAC for 1 minute, 5mA leakage current
System Power	
Power Supply	24VDC (20.4VDC ~ 28.8VDC)
Current Consumption (max.)	80mA @ 24VDC
Physical Characteristic	
Modules Insertion Mechanical Key	F1
Size of Module	35mm x 100mm x 100mm (W x H x D)
Weight of Module	190g
Backplane Installation	Any I/O module slot of Local or Expansion Backplane
Environmental Requirements	
Ambient Operating Environment	0 °C ~ 60 °C
Relative Humidity	5% ~ 95% non-condensing, no corrosive gas

LK250 - PROFIBUS-DP INTERFACE MODULE (for DP-node expand)

Description

The main purpose of LK250, equipped with a controller processor, is to allow additional expansion of I/O modules to be installed in a single Profibus-DP network segment. Within a DP network, the maximum limitation is 127 DP-nodes addresses. By using LK250, it helps to reduce the number of DP-slave station node in the network segment where the master controller resides.

Features

- Expand additional 30 DP-slave station nodes per LK250 (Expand I/O modules).
- Interconnect this extra Profibus-DP slave stations to LK250.
- Used to reduce the number of Profibus-DP slave station nodes in the network segment where the controller resides.
- **Can only be installed on extension backplanes.**
- Providing termination matching resistors for Profibus-DP.
- Support hot swap.

LED Indicators

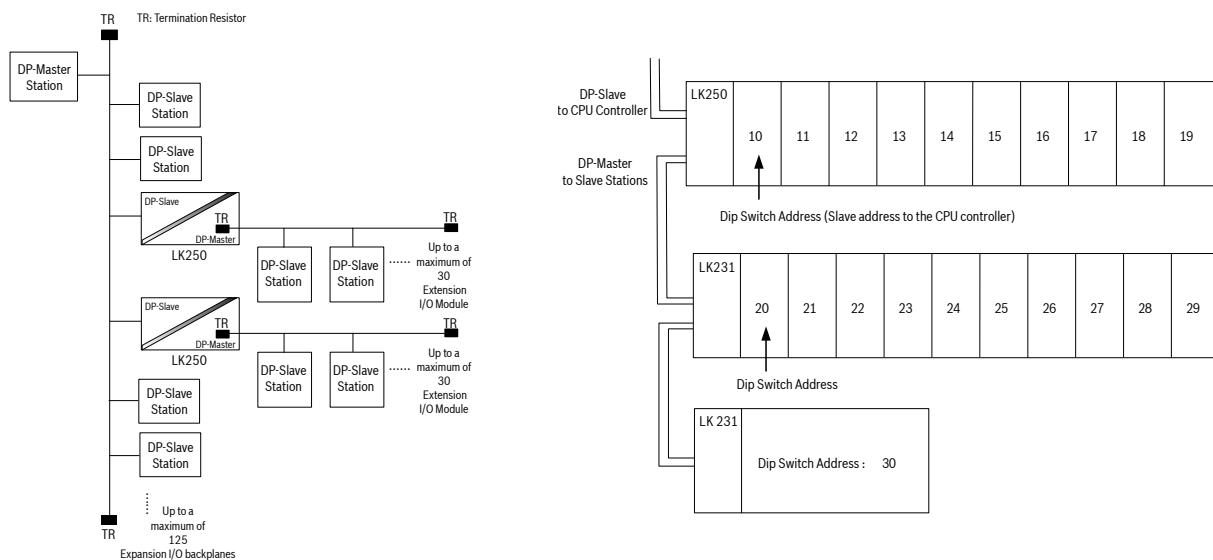

RUN Green	COM Yellow	Definition
ON	ON	Communication established, Profibus-DP network operating normally.
Flashing	OFF	Just powered on and communication not established or error occurs.
OFF	OFF	No powered supplied or faulty module.

Operating Principles

One logical Profibus-DP network segment can only support up to 127 nodes addresses (address=0 to 126). Address 126 is reserved for broadcast and address 0 is used by the master station. Hence, Profibus-DP network can support at most up to 125 slave station. When Profibus-PA equipment are used, it is even more likely to use more than 125 DP-slave station since each PA equipment (one I/O channel) will occupy a single DP note address after the DP conversion with a DP/PA coupler device.

How it works

To resolve and increase the number of slave station within a single Profibus-DP segment, LK250 Profibus-DP network extension module is used. Each LK250 may carries at most additional 30 DP-slave station nodes (or 30 extended I/O module). Logically speaking, LK250 uses the DP-slave station protocol to connects to the master controller occupying one single DP node address as seen by the controller. At the same time, it uses the DP-master station protocol to connects to the extended I/O module forming a DP logical network segment. The extended I/O modules exchange data with the master controller through the LK250 module and uses only one DP node as seen by the master controller.

TECHNICAL SPECIFICATION

LK255 - PROFIBUS-DP SLAVE INTERFACE MODULE

Description

LK255 module installed only on the I/O module slot act as a PROFIBUS-DP slave mode allows communication to any third party's PROFIBUS-DP master controller, for example Siemens Controller using PROFIBUS-DP.

Features

- Support backplane data bus. (highspeed and Profibus-DP)
- Supports PROFIBUS-DP Slave mode protocol, DB9 pin interface.
- Act as DP-Slave for the LK system and provide communication with 3rd party controller acting as DP-Master.
- Installed only on the local backplane I/O module slot.
- Hot swap.

LED Indicators

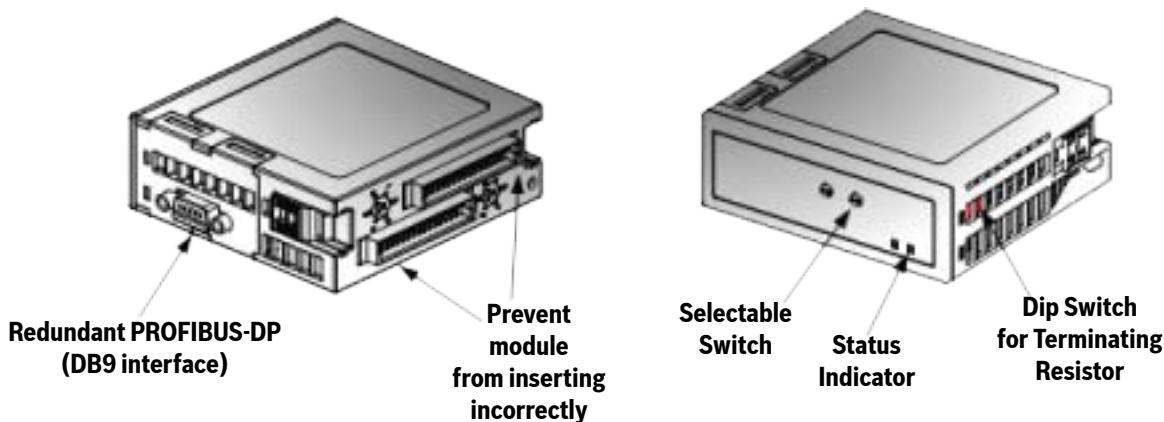

Indicator	Status	Definition
RUN Green	ON	LK255 and LK controller communication establish normally.
	Flashing	LK255 and LK controller communication not established or error occurs.
	OFF	Power is NOT supplied to the module or faulty.
DP Yellow	ON	LK255 and DP-Master communication establish normally.
	Flashing	LK255 and DP-Master communication not established or error occurs.
	OFF	No communication established with the DP-Master or not connected.

ANALOG INPUT MODULE - VOLTAGE INPUT

Description

LK410 module can manage up to 8 channels of voltage analog input signal. It communicates with its controller using PROFIBUS-DP fieldbus with a maximum baud rate up to 1.5Mbps depending on cable length and type.

Refer to PROFIBUS-DP cable type specification table for more details.

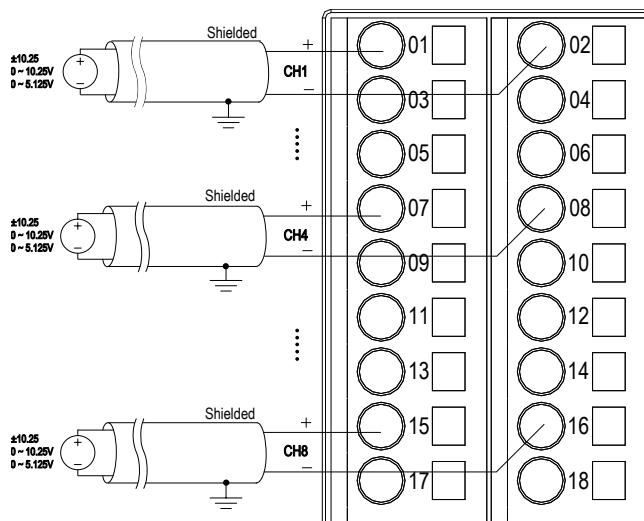

Features

- 8 channel voltage inputs.
- Voltage range: **-10.25V ~ +10.25V** or **0 ~ +10.25V** or **0 ~ +5.125V**
- LED status indicator: **RUN** or **CALibration**
- Over-limit and over-range alarm.
- Open-wired detection.
- Field calibration.
- System to field isolation.
- Hot swap.
- Supports PROFIBUS-DP slave mode.

LED Indicators

Indicator	Status		Definition
RUN Green	ON		Communication Established

ANALOG INPUT MODULES - CURRENT INPUT

**Description**

LK411 and LK414 modules can manage up to 8 channels of current analog input signal. LK411 does not provide power to either the 2-wired or 4-wired transmitter devices whereas LK414 provide the 24VDC power to the 2-wired transmitter devices. It communicates with its controller using PROFIBUS-DP fieldbus with a maximum baud rate up to 1.5Mbps depending on cable length and type.

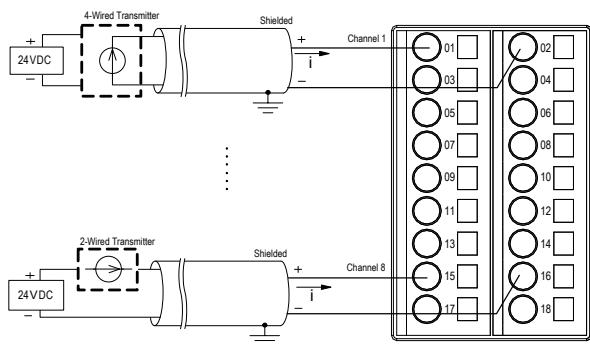

Refer to PROFIBUS-DP cable type specification table for more details.

Features

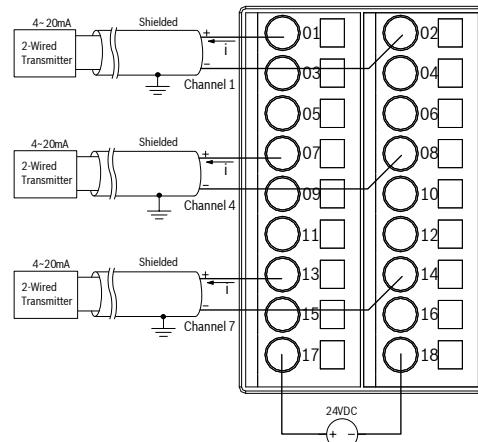

- 8 channel current inputs.
- Current range: **0 ~ +20.58mA** or **4 ~ +20.58mA**
- 2-wired or 4-wired transmitter
- LED status indicator: **RUN** or **CALibration**
- Over-limit and over-range alarm.
- Open wire detection.
- Field calibration.
- System to field isolation.
- Hot swap.
- Supports PROFIBUS-DP slave mode.

ANALOG INPUT MODULE - ISOLATED VOLTAGE/CURRENT INPUT

**Description**

LK412 module can manage up to 6 channel of either voltage or current analog input signals. every input channel are isolated. It communicates with its controller using PROFIBUS-DP fieldbus with a maximum baud rate up to 1.5Mbps depending on cable length and type.

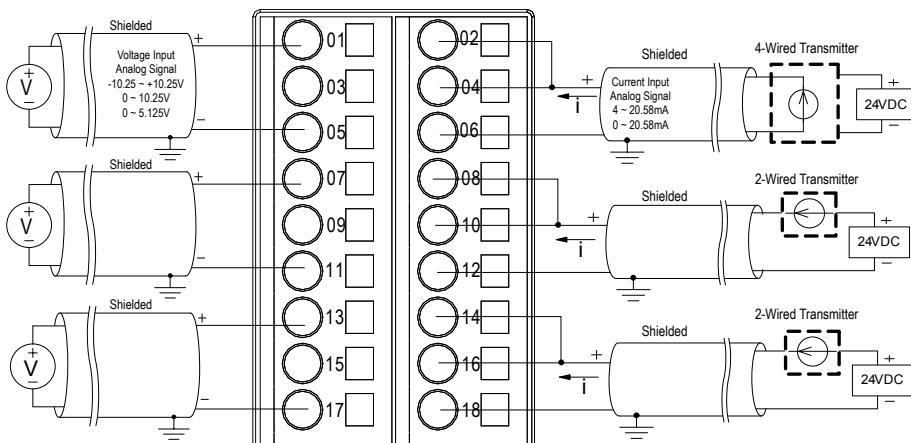

Refer to PROFIBUS-DP cable type specification table for more details.

Features

- 6 channel isolated voltage or current inputs.*
- Voltage range: **-10.25V ~ +10.25V** or **0 ~ +10.25V** or **0 ~ +5.125V**
- Current range: **0~ +20.58mA** or **4~ +20.58mA**
(2-wired or 4-wired transmitter)
- LED status indicator: **RUN** or **CALibration**
- Over-limits and over-range alarm.
- Open-wired detection.
- Field calibration.
- System to field isolation.
- Hot swap.
- Supports PROFIBUS-DP slave mode.

ANALOG INPUT MODULE - RTD INPUT

Description

LK430 module can manage up to 6 channels of RTD analog input signal. It communicates with its controller using PROFIBUS-DP fieldbus with a maximum baud rate up to 1.5Mbps depending on cable length and type.

Refer to PROFIBUS-DP cable type specification table for more details.

LED Indicators

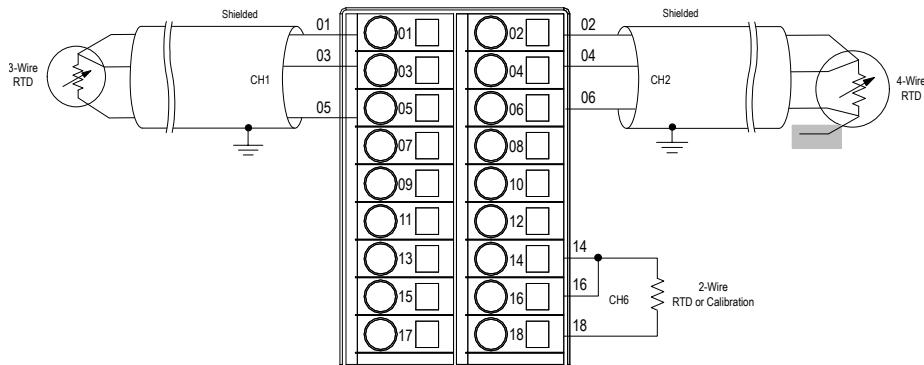

Features

- 6 channel RTD input.
- Input range: **Pt100/200/500/1000**
Ni100/120/200/500
Cu10/50
- Temperature range: **-200°C ~ +870°C**
- Resistor range: **1 ~ 4020Ω**
- LED status indicator: **RUN** or **CALibration**
- Over-limits alarm.
- Open-wired detection.
- Field calibration.
- System to field isolation.
- Hot swap.
- Supports PROFIBUS-DP slave mode.

ANALOG INPUT MODULES - THERMOCOUPLE INPUT

**Description**

LK440, LK441, and LK442 modules can manage up to 8 channels of thermocouple or millivolt-level signal. It communicates with its controller using PROFIBUS-DP fieldbus with a maximum baud rate up to 1.5Mbps depending on cable length and type.

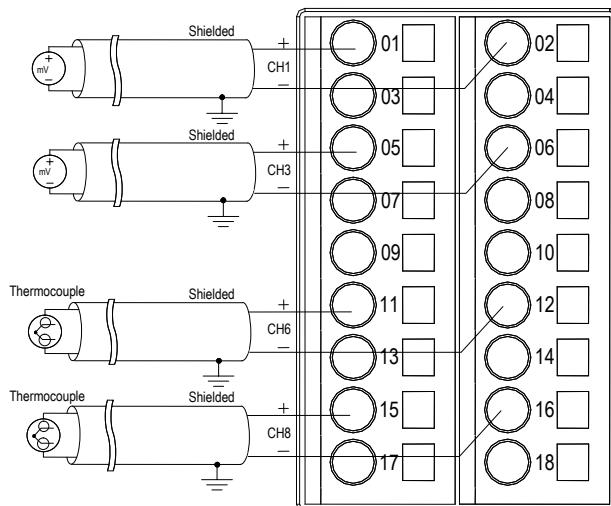

Refer to PROFIBUS-DP cable type specification table for more details.

Features

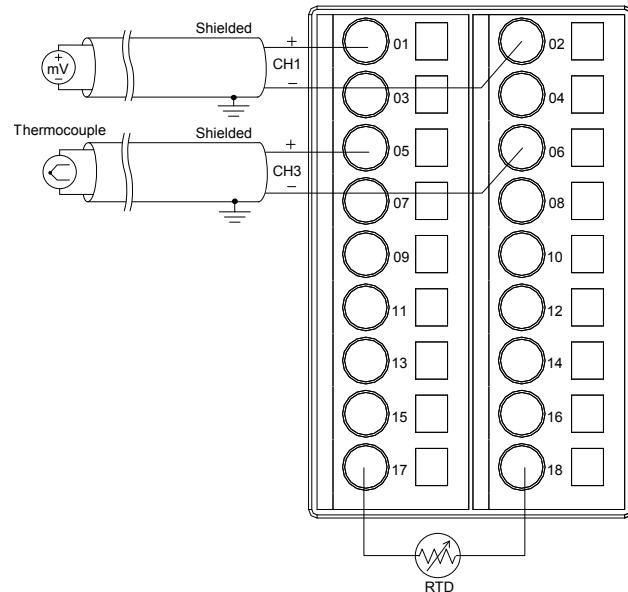

- 8 channel thermocouple/millivolt inputs
- Thermocouple type: **B / C / E / J / K / N / R / S / T**
- LED status indicator: **RUN** or **CALibration**
- Over-limit and over-range alarm.
- Open-wired detection.
- Field calibration.
- System to field isolation.
- Hot swap.
- Supports PROFIBUS-DP slave mode.
- LK440 is TC without cold-end compensation.
- LK441 and LK442 is TC with cold-end compensation but LK441 is without isolated channels.

LED Indicators

Indicator	Status	Definition
RUN Green	ON	Communication Established
	Flashing	Communication not established or error occurs
	OFF	No powered supplied
CAL Yellow	ON	Calibration Mode is ON and it is performing its calibration.
	Flashing	Did not perform any calibration or calibration is completed
	OFF	No powered supplied or not in calibration mode

ANALOG OUTPUT MODULES - VOLTAGE / CURRENT OUTPUT

Description

LK510 module can manage up to 4 channel of isolated voltage analog outputs. LK511 module can manage up to 4 channel of isolated current analog outputs. It communicates with its controller using PROFIBUS-DP fieldbus with a maximum baud rate up to 1.5Mbps depending on cable length and type.

Refer to PROFIBUS-DP cable type specification table for more details.

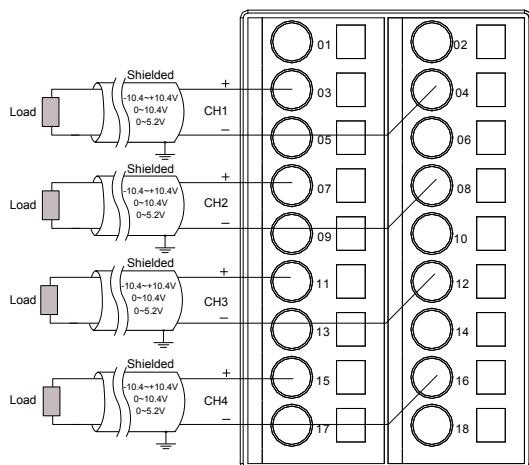

Features

- 4 channel isolated voltage or current outputs
- Voltage range: **0~5.125V / 0~10.25V / -10.25~+10.25V**
- Current range: **0~21mA / 4~20mA**
- LED status indicator: **RUN** or **CALibration**
- Open-wired detection.
- Field calibration.
- System to field isolation.
- Hot swap.
- Supports PROFIBUS-DP slave mode.

ANALOG INPUT & ANALOG OUTPUT MODULE

Description

LK810 AIAO mix module can manage up to 4 channel of voltage or current analog inputs and 2 channel of voltage or current analog outputs. It communicates with its controller using PROFIBUS-DP fieldbus with a maximum baud rate up to 1.5Mbps depending on cable length and type.

Refer to PROFIBUS-DP cable type specification table for more details.

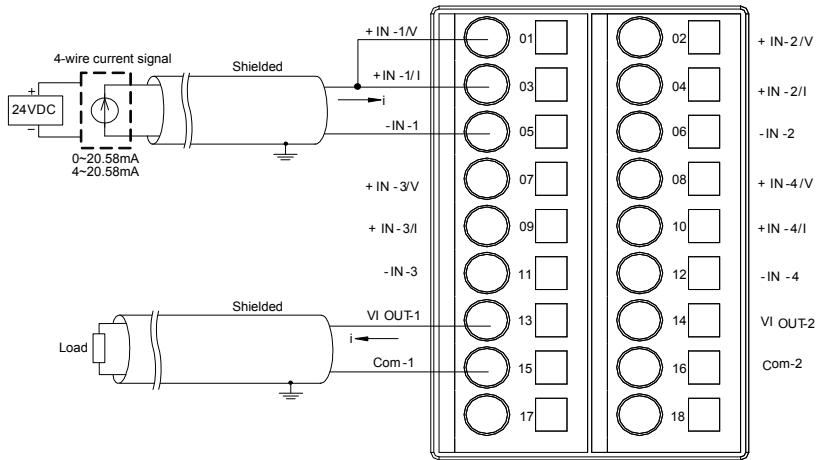

Features

- 4 channel voltage or current inputs.
- 2 channel voltage or current outputs.
- Voltage range:
0~5.125V / 0~10.25V / -10.25~+10.25V
- Current range:
0~21mA / 4~20mA
- LED status indicator: **RUN** or **CALibration**
- Open-wired detection.
- Field calibration.
- System to field isolation.
- Hot swap.
- Supports PROFIBUS-DP slave mode.

DIGITAL INPUT MODULES - DC INPUT

Description

LK610 is a 16 channels Digital Input modules.

It communicates with its controller using PROFIBUS-DP fieldbus with a maximum baud rate up to 1.5Mbps depending on cable length and type.

Refer to PROFIBUS-DP cable type specification table for more details.

Features

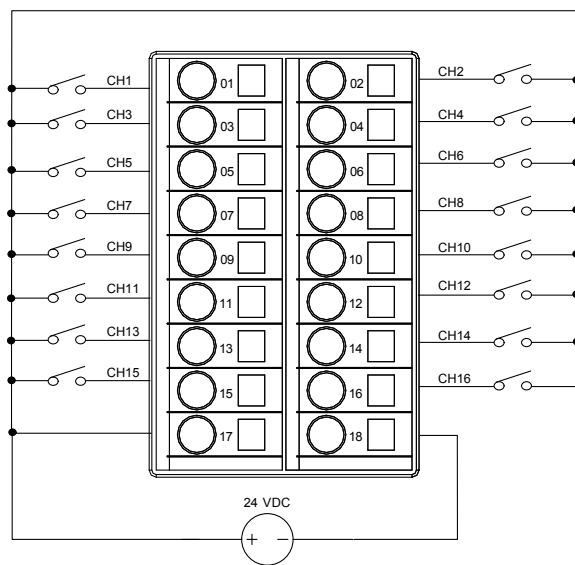

- 16 channels DC voltage inputs.
- Voltage range:
LK 610: **12/24VDC Sink**
- LED status indicator: **RUN & Channels**
- Power loss detection.
- Reverse power polarity protection.
- System to field isolation.
- Hot swap.
- Supports PROFIBUS-DP slave mode.

DIGITAL OUTPUT MODULES - TRANSISTOR OUTPUT, DC

Description

LK710 digital transistor output module can manage up to 16 channels of VDC output. It communicates with its controller using PROFIBUS-DP fieldbus with a maximum baud rate up to 1.5Mbps depending on cable length and type.

Refer to PROFIBUS-DP cable type specification table for more details.

Features

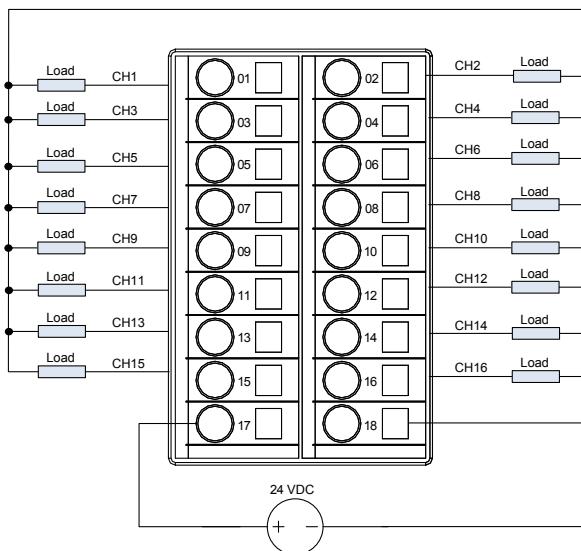

- 16 channels transistor DC outputs.
- Voltage range: **10 ~ 31.2VDC**
- LED status indicator: **RUN & Channels**
- Fail-safe output
- Output read-back diagnostic
- Power loss detection.
- Over-current protection
- System to field isolation.
- Hot swap.
- Supports PROFIBUS-DP slave mode.

TECHNICAL SPECIFICATION

LK710 16 channels Digital Transistor Output Module, DC Output Signal		
Digital Output		
Number of Output		16 channels
Output Type		Transistor, solid-state MOSFET
Output Voltage	Rated Value	24VDC
	Allowed Range	10~31.2VDC
Output Current	per Channel	0.5A @ 40 °C and 0.4A @ 60 °C (linear decremental)
	per Module	8A @ 40 °C and 6.4A @ 60 °C (linear decremental)
Surge Current per Channel		1A for 10ms, cycle at 2s @ 60 °C
Over-current protection		Supported, every 2 channels uses a common self-recovering fuse protection
Load Current (minimum)		3mA per channel
ON-state Voltage Drop (maximum)		150mV @ 0.5A
OFF-state Leakage Current		1mA per channel
Output Delay Time	OFF->ON	1ms (maximum)
	ON->OFF	1ms (maximum)
Program mode output		Hold last state (default), or Program mode state
Program mode state		ON or OFF, every channels are configurable
Fault mode output		Hold last state (default), or Fault mode state
Fault mode state		ON or OFF, every channels are configurable
Isolation		
Isolation in-between channels		--
Isolation Endurance (field-to-system)		500VAC for 1 minute, 5mA leakage current
Diagnostic Functions		
Power Loss detection		Supported, diagnostic report as 0x04 when power loss, 0x00 when power is recovered
Hot Swap		Supported
Fieldbus Communication		
Protocol		PROFIBUS-DP slave mode, compliance with IEC61158-3/EN50170 standard
Baud Rate*		1.5Mbps, 500Kbps, 187.5Kbps, 93.75Kbps, 45.45Kbps, 31.25Kbps, 19.2Kbps, 9.6Kbps
Redundancy		Supported
System Power		
Power Supply		24VDC (20.4VDC ~ 28.8VDC)
Current Consumption		70mA @ 24VDC
Physical Characteristic		
Modules Insertion Mechanical Key		E0
Size of Module		35mm x 100mm x 100mm (W x H x D)
Weight of Module		180g
Backplane Installation		Any local or expansion backplane.
Environmental Requirements		
Ambient Operating Environment		0 °C ~ 60 °C
Relative Humidity		5% ~ 95% non-condensing, no corrosive gas

DIGITAL OUTPUT MODULES - RELAY OUTPUT (NO), AC / DC

Description

LK720 digital relay output (normally open) module can manage up to 8 channels of VAC or VDC output. It communicates with its controller using PROFIBUS-DP fieldbus with a maximum baud rate up to 1.5Mbps depending on cable length and type.

Refer to PROFIBUS-DP cable type specification table for more details.

Features

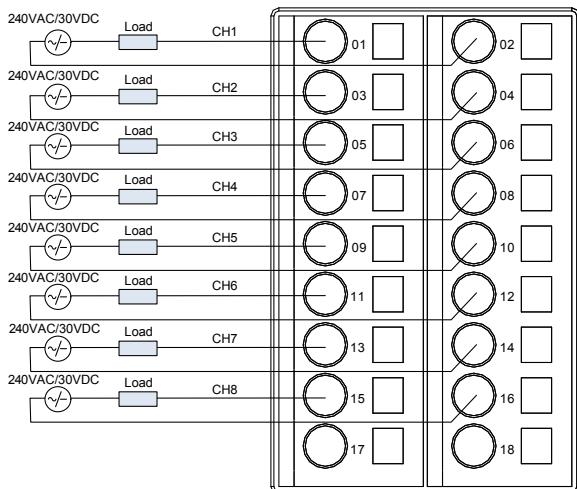

- 8 channel relay AC/DC outputs, normally open.
- AC voltage range: **10 ~ 265VAC**
- DC voltage range: **5~125VDC**
- LED status indicator: **RUN & Channels**
- Fail-safe output
- Output read-back diagnostic
- Power loss detection.
- Over-current protection
- Channel to channel isolation.
- System to field isolation.
- Hot swap.
- Supports PROFIBUS-DP slave mode.

SOE MODULES - 16 CHANNEL SOE INPUT, Sink Type, DC

Description

LK630 is a SOE (Sequential of Event) module. It has enough buffer and will not miss any event while ensuring accurate signal resolution. In addition, it also provides anti-bouncing function to deal with contact bouncing.

It communicates with its controller using PROFIBUS-DP fieldbus with a maximum baud rate up to 1.5Mbps depending on cable length and type.

Refer to PROFIBUS-DP cable type specification table for more details.

Features

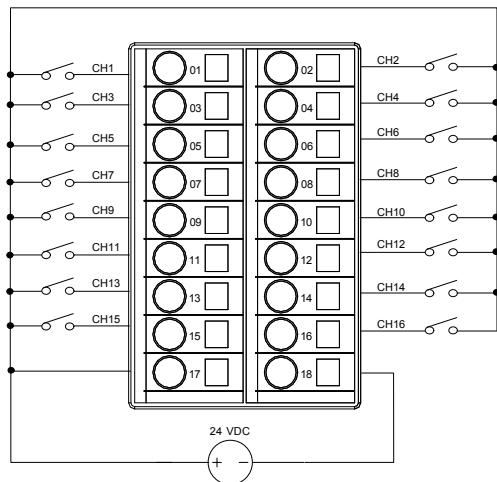

- 16 channels sink type SOE inputs.
- Voltage range: **10~31.2VDC Sink**
- Anti-bouncing filter
- SOE resolution, 1ms
- GPS or CPU controller time synchronization mode
- LED status indicator: **RUN & Channels**
- Power loss detection.
- Reverse power polarity protection.
- System to field isolation.
- Hot swap.
- Supports PROFIBUS-DP slave mode.

SOE

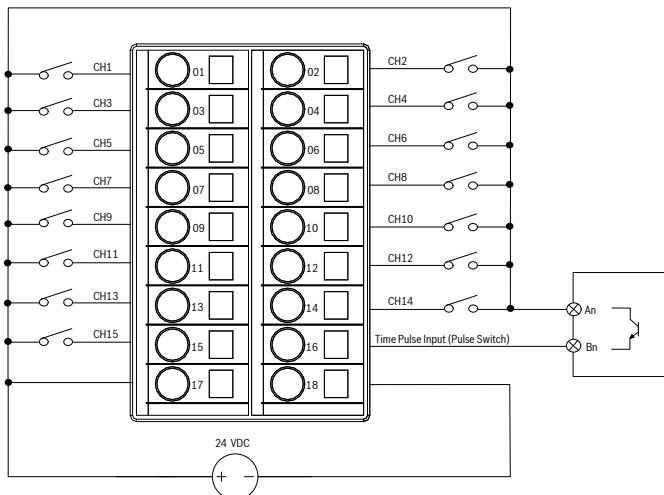

LED Indicators

Indicator	Status	Definition

COUNTER MODULES

Description

LK620 is a counter module designed to perform bidirectional counting for inputs from encoder and high-speed switches. It provides two-channel inputs and can receive pulse input signals at a frequency up to 1MHz.

It communicates with its controller using PROFIBUS-DP fieldbus with a maximum baud rate up to 1.5Mbps depending on cable length and type.

Refer to PROFIBUS-DP cable type specification table for more details.

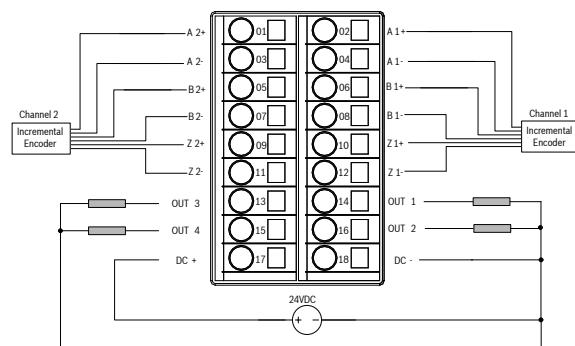

Features

- 2-channel inputs counter.
- Bidirectional counters, frequency measurement.
- Z signal inversion
- Count storage
- Debounce filtering
- Disable counter function
- Counting Range: 0 ~ 4,294,967,295 (32 bits)
- Frequency Measurement Range: 0.1~1MHz
- Channels LED indicator
- Channel to channel isolation.
- Power loss detection
- System to field isolation.
- Hot swap.
- Support PROFIBUS-DP protocol.

24VDC (5A, 120W) INPUT POWER SUPPLY, 115/230VAC

Description

LK910 is a specially design power supply module for 115/230 AC Voltage input providing output power of 24VDC to the LK backplanes.

Unique features of LK910 includes :-

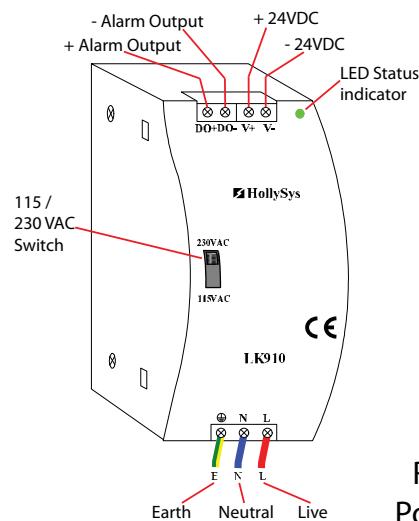

- Supporting parallel redundancy.
- Overload protection.
- Over voltage protection.
- Over temperature protection.
- Output current limiting.
- Alarm Output Status.

Features

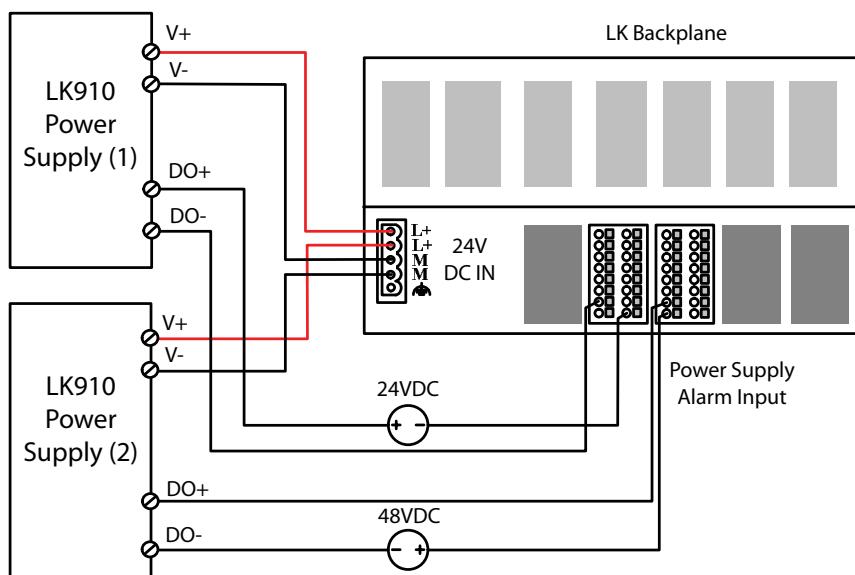

- Input Voltage: 115VAC / 230 VAC, switchable.
- Output Voltage: 24VDC.
- Rated Power: 120W
- Support 1+1 Parallel Redundancy.
- Switching Frequency: 55KHz.
- Output short circuit / Overload Protection.
- Output over voltage protection.
- Output over temperature protection.
- Output status query and LED indicator.
- Input / Output / Casing isolation.

PWR

Redundant Power Supply

Circuit diagram of Dual LK910 parallel redundancy power supply with alarm connection.

TECHNICAL SPECIFICATION

LK910 24VDC 5A 120W Power Supply	
Input	
Voltage Range	88~132VAC / 176~264AC, Switch Selectable
Frequency Range	47Hz~63Hz
Conversion Efficiency	> 80%
AC Current	3.3A/115VAC, 2A/230VAC
Output	
Rated Output Voltage	24VDC
Adjustable Output Range *	24~28VDC
Output Voltage Accuracy	±5%
Rated Output Current	5A
Output Current Range	0 ~ 5A
Rated Output Power	120W
Ripple Noise	<240mVP-P
Load Regulation	<±5%
Voltage Regulation	<±2%
Step-load characteristic	<± 5% @ from 20% to 70% of the load mutation, settling time <50ms
Maintenance time	220VAC input, 70% of the load, the power output not less than 95% after the rated voltage, maintaining 30ms
Cooling Method	Natural cooling
Boot Soft-Start	Power output voltage is gradually increased, the output peak voltage < rated voltage ± 5%
Cooling Method	Natural cooling
1+1 Parallel Redundancy	Supported
Protection & Alarm	
Overload Protection	105% ~ 150% rated output power Protection Mode: Output current limiting, fault eliminated automatic recovery
Overvoltage Protection	29~33VDC Protection mode: Turn off the output, re-power on recovery
Over Temperature Protection	90°C±5% Protection mode: Turn off the output, automatic recovery after the temperature drop
Alarm Output Status	When power output is normal, the status switch turn-on, otherwise cut-off. Isolation in-between status switch and power
Output Status Indication	Indicator light is ON for normal output normal
Insulation	
Insulation Resistance	Input and Casing: 500VDC > 100MΩ Input and Output: 500VDC > 100MΩ Output and Casing: 500VDC > 100MΩ
Dielectric Withstand	Input and Casing: 1500VACrms, 1min Input and Output: 3000VACrms, 1min Output and Casing: 500VACrms, 1min
Physical Characteristic	
Size of Module	65.5mm x 125.2mm x 100mm (W x H x D)
Weight of Module	790g
Installation Method	35mm DIN rail installation
Status Indicator	Green color LED
Environmental Requirements	
Ambient Operating Environment	-10 °C ~ 60 °C (Reference output derating curve, when the full output at 45 °C)
Relative Humidity	10% ~ 95% non-condensing
Storage Environment	-20 °C ~ 85 °C, 95% humidity
Certification	
Safety Certification	UL508, TUV EN60950, CE

CPU Module	LK202	100MHz CPU Module, for single CPU backplane, Computation Speed: 0.08µs per step, program: 4MB, data: 8MB+512KB power-loss prot.
	LK205	266MHz CPU Module, for single CPU backplane, Computation Speed: 0.03µs per step, program: 8MB, data: 16MB+1MB power-loss prot.
	LK207	533MHz CPU Module, for single CPU backplane, Computation Speed: 0.013µs per step, program: 16MB, data: 64MB+1MB power-loss prot.
	LK210	533MHz CPU Module, for redundant CPU backplane, Computation Speed: 0.013µs per step, program: 16MB, data: 64MB+1MB power-loss prot.
Communication Modules	LK231	PROFIBUS-DP Communication Adapter Module (support max. of 125 modules or DP-slave nodes)
	LK232	PROFIBUS-DP Bus Repeater Module
	LK233	PROFIBUS-DP Optical Fiber Interface module
	LK239	MODBUS Communication Module (Master or Slave)
	LK250	PROFIBUS-DP Interface Module (For expanding max. of 30 modules per DP-slave node)
	LK255	PROFIBUS-DP Slave interface module, LK act as DP slave system connecting with 3rd party.
AI Modules	LK410	8-channel AI Module, Voltage Input, 16 bits, ±10V / 0~10V / 0~5V, no isolation
	LK411	8-channel AI Module, Current Input, 16 bits, 4~20mA / 0~20mA, no isolation, 2 or 4-wired transmitter
	LK412	6-channel AI Module, Voltage/Current Input, 16 bits, ±10V / 0~10V / 0~5V or 4~20mA / 0~20mA, channel isolation
	LK414	8-channel AI Module, Current Input, external powered, 16 bits, 4~20mA, no isolation, 2-wired transmitter
	LK430	6-channels AI Module, RTD Input, 16 bits, Pt100/200/500/1000, Ni100/120/200/500, Cu10/50
	LK431	4-channels AI Module, RTD Input, Isolated channels 16 bits, Pt100/200/500/1000, Ni100/120/200/500, Cu10/50
	LK441	8-channels AI Module Thermocouple with cold-end compensation, 16 bits, -12mV~+78mV, -12mV~+32mV, TC Type: B,C,E,J,K,N,R,S,T
	LK442	6-channels AI Module Thermocouple with cold-end compensation, Isolated Channels, 16 bits, -12mV~+78mV, -12mV~+32mV, TC Type: B,C,E,J,K,N,R,S,T

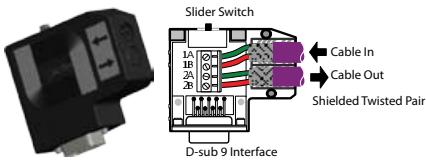

SELECTION

Module Type	Model	Description
AO Modules	LK510	4-channels AO Module, Voltage Output, 14 bits, ±10V / 0~10V / 0~5V, isolation in-between channels
	LK511	4-channels AO Module, Current Output, 12 bits, 4~20mA / 0~20mA, isolation in-between channels
AI/AO Modules	LK810	4-channels AI / 2-channels AO Module, input: ±10V / 0~10V / 0~5V or 4~20mA / 0~20mA, output: ±10V / 0~10V / 0~5V or 4~20mA / 0~20mA
DI Module	LK610	16-channels DI Module, 12/24VDC, sink, no isolation
DO Modules	LK710	16-channels DO Module, 10~30VDC, transistor DC output,
	LK720	8-channels DO Module, 10~265VAC / 5~125VDC, relay, normally open
SOE Module	LK630	16-channels SOE Module, 12/24VDC SOE input, sink type, no isolation, SOE, 1ms resolution
Counter Module	LK620	2-channels counter module (<500KHz), Profibus-DP, Counting Range: 0 ~ 4,294,967,295. Freq. Measurement Range: 0.1 ~ 1MHz
Power Supply	LK910	Power Supply input 115/230VAC, output: 24VDC, 5A, 120W
Accessories	LK230	PROFIBUS-DP Connector for DB9 Backplane (For use with LK102, LK122, LK114)
	LKX002	LK series PLC, PROFIBUS-DP expansion cable, 3 meters
	LKX006	LK series PLC, Serial RS-232 communication cable (For LK239)
	LKX007	LK series PLC, Serial RS-485 communication cable (For LK239)
	LKF003	LK series PLC, Rotational tools for backplane's mechanical key
	LKF006	LK series PLC, SD card, 2GB
	LKC131	LK Series PLC, Dummy Empty Module
	LKC170	LK Series PLC, Terminal Point Cover
Software	LKS001	LK series PLC, PROGRAMMING SOFTWARE, English

Additional Accessories

LK230

- PROFIBUS-DP connector adapter for interconnection between LK 102/122 and LK114. It provides a convienence way of cabling, increase protection from EMC interference, and cabling reliability.

LKC131

This is the dummy module without any electronic boards. It is used to fill in the unused LK module slots.

LKX002

- This is the PROFIBUS-DP cable (3 meters) for used with LK PLC.

LKF003

- This is the Rotational Tools for the Backplane's mechanical key

LKF006

This is the 2GB SD card for LK PLC for backup of programming logic. This SD card is preformatted for LK usage.

LKC170

- This is the terminal cover to protect the terminal points.

LKS001

This CD contains PowerPro programming software for LK PLC and other documentations.

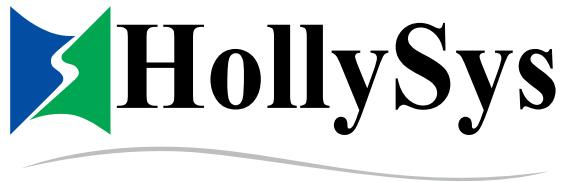

LKX006

This is the RS-232 cable for LK239 MODBUS module usage.

LKX007

This is the RS-485 cable for LK239 MODBUS module usage.

Automation Technology for Better Work, Life, and Environment

International Business

Hollsys (Asia Pacific) Pte Ltd

Address: 200 Pandan Loop, #08-01
Pantech 21, Singapore 128388
Tel: +65 6777-0950
Fax: +65 6777-2730

Automation Technology for Better Work, Life, and Environment

For many years, the Hollsys name has stood for quality and reliability. Hollsys proudly offers a wide range of automation and control products from PLCs to DCS to help you find the solution for any industrial automation and process control application. We are the global supplier of choice for innovative technology backed by the highest level of service and support. When you need products and solutions you can rely on, choose HollySys.
